

## **Calgary, Alberta, Canada**

A pediatric dentist is required for a very busy and long-established, full treatment scope private pediatric practice.

The patients in this successful practice have been treated in the most caring, preventive-oriented, and idealistic manner for over 30 years.

A desire for hospital affiliation is a necessity. An inclination to teach and do clinical research, although not a must, would be an asset.

This is as an associate position leading to a role reversal through practice purchase.
